

# TruVision<sup>™</sup> Video Interface

Plug-in interface for supported Tecom<sup>®</sup> management software

#### Overview

Tecom® management software allows third-party video systems to integrate directly using dedicated plug-in modules.

Video integration in Tecom management software enables common alarm, access, and video management tasks to be performed from a single user interface. This greatly simplifies operation for the end user by allowing visual verification of alarms and other occurrences, such as door access events.

Video footage can be linked to alarm events to provide visual verification of the reported alarm. This means that users can instantly recall footage based on an event, rather than having to manually search through hours of footage. The retrieved footage can then be exported directly to a USB key.

Operators can manually view live or recorded footage which can be recalled from graphic maps or via a drag-and-drop method from a list into a matrix view. Matrix views can be saved and recalled, on the go, by operators to save time. PTZ cameras can be controlled directly by operators or sent to a preset automatically on alarm.

Integration also assists with system maintenance. Video system alarms, such as camera video loss, are reported into Tecom management software, which means that operators can easily see when an issue in the video system needs to be addressed.

### Specifications

| Video System                  | TruVision                              |
|-------------------------------|--|
| Supported SDK version         | n/a (see supported devices)            |
| Supported management software | Forcefield 7.2, Security Commander 2.3 |
| Integration method            | Video Module Plug-in                   |
| Written by                    | Aritech                                |
