

WMS Pro

Web Management System

Discover the Next Generation of
Tecom Management Software

WHY CHOOSE WMS PRO

WMS Pro is the next step in management software, providing a seamless and modern management solution for your security and access control system.

Designed and developed in Australia, for Australian and global markets.

WMS Pro is the latest software suite from Aritech that works hand-in-hand with your Tecom security and access control systems.

WMS Pro has been designed to improve safety, situational awareness and increase efficiency, while adding value to any installation, for small, medium and large enterprises.

FEATURE-RICH SOFTWARE

- | | | | |
|-------------------------------|---|--|---|
| ✓ Graphical site maps | ✓ NAC integration | ✓ Automated reporting | ✓ Automations (time/event triggers & actions) |
| ✓ Tecom Discovery integration | ✓ Comprehensive alarm management | ✓ Cardholder and Credential Management | ✓ Interactive widget-based dashboard |
| ✓ Flexible Access Rights | ✓ Dark Mode | ✓ History logs and export | ✓ Documented REST API |
| ✓ Reports | ✓ Wizards & Tools | ✓ Custom card formats | ✓ CTPlus integration |
| ✓ Device command and control | ✓ Tecom Smart Card Programmer Integration | ✓ Web-based multi-client interface | ✓ Card template design and printing |
| ✓ Asset tracking | ✓ Proactive maintenance reminders | ✓ Cyber secure | ✓ Situational awareness incident response |

UPGRADE TODAY TO TAKE FULL ADVANTAGE OF WMS PRO 3'S NEW CAPABILITIES

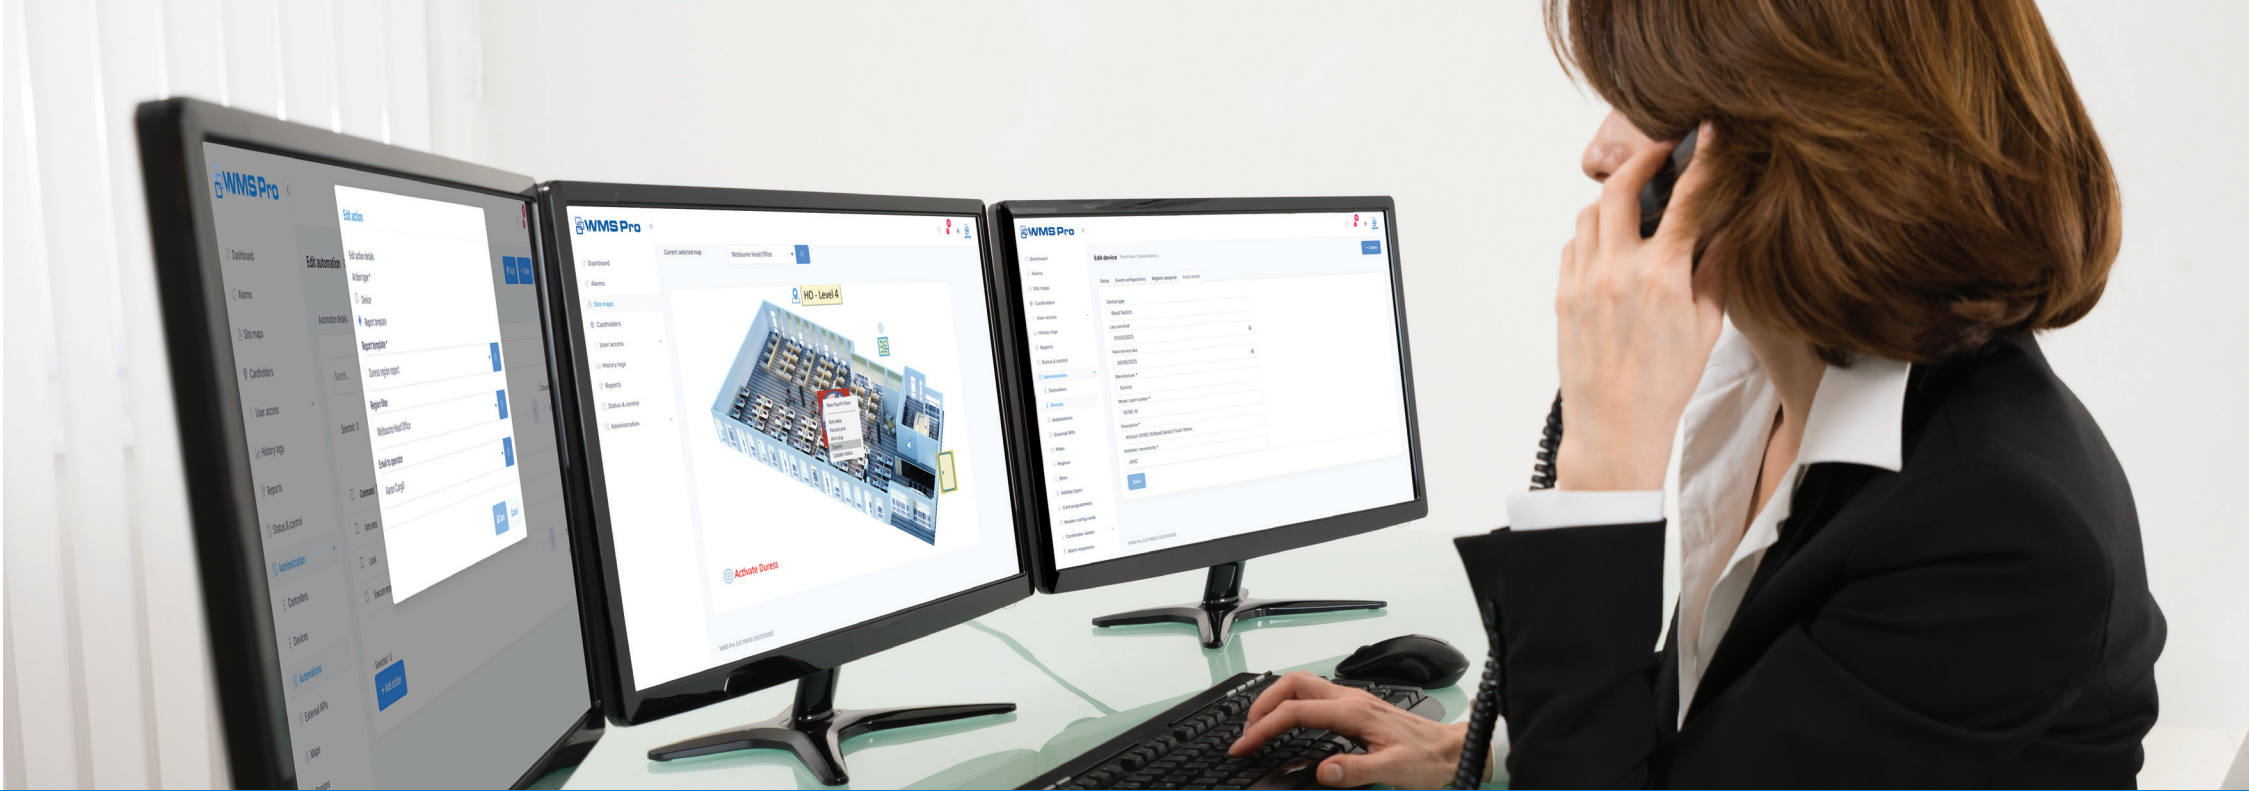

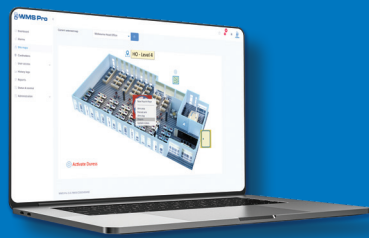

PHOTO ID PRINTING

The card template designer allows the operator to select from cardholder fields or use Labels to create custom text to appear on the card template for all cardholders.

By organising cardholders into Departments in WMS Pro, Operators can leverage the ability to create different card templates for each Department to distinguish cardholder authority levels at a glance.

SITE MAPS

Site maps provide an easy-to-understand interface for all types of Operators, such as guards, reception staff, site managers, and more.

Site maps allow an Operator to view a fully customisable layout of their site and devices, with each device indicating its live status, and providing quick access to control commands and active alarms.

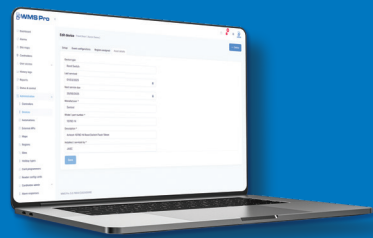

Operators can choose any image to use as the background for their map, create and customise points to represent devices, create links between maps, and restrict access to any map based on the access permissions of Operators.

AUTOMATIONS (EVENT & TIME TRIGGERS)

New to WMS Pro is a powerful suite of customisable automations, allowing actions to be performed automatically in response to specific events or schedules. Automations allow customers to streamline common & repetitive tasks, such as scheduling a report to be sent to store managers at 9am every Monday, or locking any number of doors across multiple Controllers when a lockdown switch is activated.

Let WMS Pro automations work for you, even while you're away from the screen.

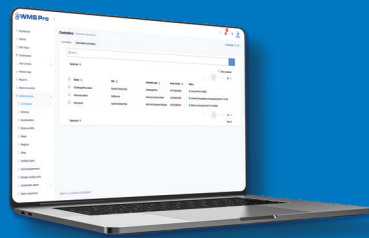

DEVICE ASSET TRACKING

Tracking assets is a crucial and critical aspect of any site, with specialised requirements around security and access control systems to manage servicing and maintenance of the systems that protect critical infrastructure.

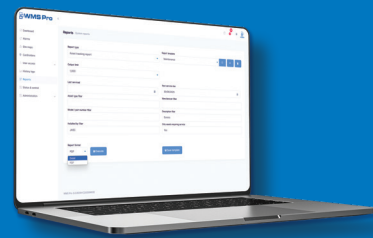

WMS Pro simplifies this process by storing details of physical assets, represented as devices in your system. This ensures that real-world information such as device type, manufacturer, model, installation date, and the next service due date are all stored directly with the device record in WMS Pro. This makes service and maintenance easier and more accessible when troubleshooting or replacing equipment, and WMS Pro is even equipped with the ability to generate preventive maintenance reports listing all devices due for service leading up to a specified date, and can alert Operators when devices have passed their service due date.

WMS Pro puts preventive maintenance at your fingertips, ensuring the health of your system isn't left as an afterthought.

ADDITIONAL CONTROLLER TYPES

In addition to enrolling ChallengerPlus and Discovery control panels, customers can now also enrol ChallengerLEPlus control panels, and Network Access Controllers connected directly to the software. Whilst ChallengerLEPlus control panels are licensed the same as ChallengerPlus and Discovery controllers, NAC licensing is managed via a new license type, ensuring that costs are comparable for a range of use-case scenarios.

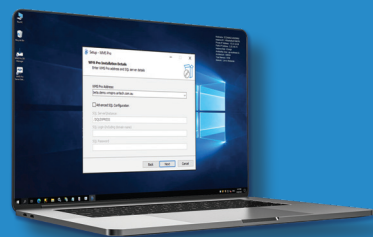

NEW REPORTING FEATURES

Reporting in WMS Pro is continually being enhanced and expanded, ensuring that you have access to detailed information when you need it.

In addition to standard reports for history events, Cardholder and access group summaries etc, customers can also run customised asset tracking reports, inactive Cardholder reports, and region occupancy reports. Customers running reports with customisable parameters also benefit greatly from the new report templates functionality, allowing those customisations to be saved for repeated use.

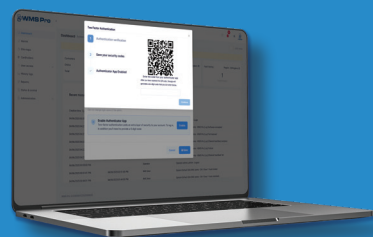

You've asked, we've listened.

WE'VE ENHANCED WMS PRO WITH SIGNIFICANT IMPROVEMENTS IN...

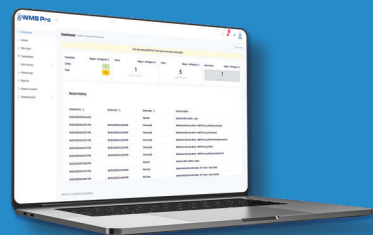

INSTALLATION

Improvements to the WMS Pro server software allows more advanced installations to proceed easier than ever. Advanced SQL Configuration during the installation process allows you specify the location of the SQL database and instance name, along with the username and password authentication details to be used by WMS Pro when connecting to the database.

2-FACTOR AUTHENTICATION (2FA)

2FA support has been expanded in WMS Pro to support popular authentication apps, such as Google Authenticator and Authy, which can generate unique codes without requiring email setup or internet connectivity. This provides more options, and allows for greater security when securing Operator logins to the system.

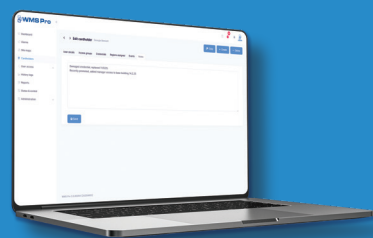

DASHBOARD

The dashboard is the cornerstone of any management software package. It provides an overview of your system at large, and with new interactive options for widgets, Operators can quickly navigate to related sections of the system, with appropriate filters pre-applied, with a single click. This makes actioning tasks related to the dashboard info quick and easy.

ALARM ENHANCEMENTS

Managing alarms is a critical aspect to your security system, and WMS Pro adds a new level of situational awareness to the already powerful suite of options by adding current device status and quick actions to the alarm detail screen, letting Operators control doors or isolate equipment without interrupting their current tasks,—boosting efficiency. Alarms can also trigger full-screen overrides to ensure critical events, such as duress conditions, are seen and prioritised more effectively.

CARDHOLDER BEHAVIOUR

WMS Pro 3 gives Operators enhanced visibility into Cardholder behaviour, including the ability to add custom notes for record-keeping or sharing. It can track inactivity, trigger alarms after a set period, and optionally void inactive credentials. Operators can set capacity limits, and monitor real-time Cardholder presence. Features like muster reporting and region counting are simplified, using existing hardware at no extra cost for all WMS Pro users.

WMS PRO

LITE vs STANDARD EDITION

WMS Pro is available in two base editions - **Lite** and **Standard**.

- **Lite** edition is ideal for small customers who may not require alarm management and just want a modern and easy to use management software for their Tecom system
- **Standard** edition is ideal for customers managing large and/or multi-site systems, with the potential for future integrations to manage cardholders and/or devices using third party systems

	Lite Edition	Standard Edition
Included Controllers	1	5
Included NACs	0	0
Max Controllers / NACs (combined)	50	600
Included Operators (active sessions)	2	5
Max. Operators (active sessions)	20	300
Tecom Discovery Integration	Yes	Yes
Dark Mode	Yes	Yes
Alarm Handling	Optional	Yes
Site Maps	Yes	Yes
Automations	Yes	Yes
External API	N/A	Optional

About Aritech

Aritech provides leading security and life-safety solutions for both commercial and residential applications covering intrusion, video, transmission and access. Offering some of the most-trusted product names in the industry, and backed by ongoing partner services and support, Aritech helps customers secure and protect what matters most.
