

## Market Release Note

### MRN - Axon Release

---

Product number:	Axon256-AU
Product description:	Axon Control Panel
Product version:	MR3.1
Release date:	11/11/2024

### General information

---

Aritech is pleased to announce both the release of the Axon security product range, and the new partnership with Video Security Products Pty Ltd (VSP Solutions).

Axon is an integrated intrusion and access control system, designed with user experience, ease of installation, and connectivity at the forefront.

Aritech has released this product to VSP and the ANZ security market to address feedback from customers about smaller installations that still require high standards of intrusion and access control.

Along with the Axon256-AU control panel, a full range of expanders, readers, credentials and other peripheral devices have been released to VSP.

### Channel

---

As our sole distributor of Axon, VSP Solutions will be the primary contact point for all sales and support enquiries. Several VSP staff have received in depth training on the solution, and all sales staff have received sales training to support the launch of Axon.

### Axon firmware information

---

The market release firmware of Axon is 3.1, the most recent market ready firmware made available from the Gdansk engineering centre.

Also available on request is RC3.3 which contains additional features that will be ready for market release in December 2024.
